

TRI Post-market Clinical Follow-up (PMCF) Study

Preliminary Results

Aim

The TRI is a multicentre clinical study to provide evidence for the performance of the TRI Dental Implant System in daily practice:

- ✓ High primary stability
- ✓ Reliable osseointegration
- ✓ Successful prosthetic restoration

Timelines

The TRI PMCF study was initiated in Q1 2014 and is an on-going study to continuously collect evidence for the impeccable clinical performance of the TRI Dental Implant System.

A status report is issued at the end of every year.

Participants, Centres

Dr. M. Steigmann (Germany), Prof. D. Brener (Australia), Dr. Hermann (Switzerland), Prof. Smeets (Germany), Prof. Ali Tahmaseb (Netherlands), Dr. Kamm (Germany), Prof. Gökbuget (Turkey), Dr. Linkevicius (Lithuania), further centres to be added within 2016.

Intermediate Results 2015

Implants documented: 22

- ✓ 100% High primary stability
- ✓ 100% Osseointegration
