

## Exclusive Invitation

# TRI® Performance Days 2011

Learn about the innovative TRI® Performance Concept developed by lead clinicians around the world in order to increase your performance in daily implantology.

The concept integrates three essential parameters for success:

### 1. TRI®-ConicalHex:

The ConicalHex TRI-Friction implant-abutment connection with a 1° degree taper eliminates the risk of a microgap and guarantees **maximum abutment stability**.

### 2. TRI®-BoneAdapt:

TRI's implant body step-design has been developed to facilitate the **best performing bone adaptation** in the respective bone areas.

### 3. TRI®-Grip:

The apical part of this implant allows for a **maximum of initial stability** for all indications, but specifically immediate placement.

## Speakers

### **Dr. Marius Steigmann**

Enhanced results in soft and hard  
Tissue management through a performance  
Orientated approach to implant design.

### **Tobias Richter**

Introduction to the TRI Performance Concept  
and an overview on the portfolio strategy.

### **Dr. Drazen Tadic**

Dental Soft and Hard Tissue Biomaterials:  
From Development to Clinic

<u>Frankfurt,</u>	<u>08.06.2011</u>
