DIGITAL IMPLANT PERFORMANCE

We are glad to invite you to the TRI® World Congress in Ibiza. What better place to meet all together than in the Mediterranean island. With sandy beaches and a perfect climate during the whole year, this glittering little island has it all.

With our growing presence in more than 45 markets world-wide, TRI® hosts this scientific congress to foster the exchange of knowledge and experience for the benefit of our customers and their patients world-wide.

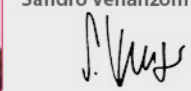

The scientific topic of the congress Digital Implant Performance has the goal to show to all delegates the significant importance of the digital treatment. We are excited to present world-renowned speakers who are experts in the various segments. Enjoy numerous high-quality presentations and be inspired by different scientific approach, practical cases and discussions.

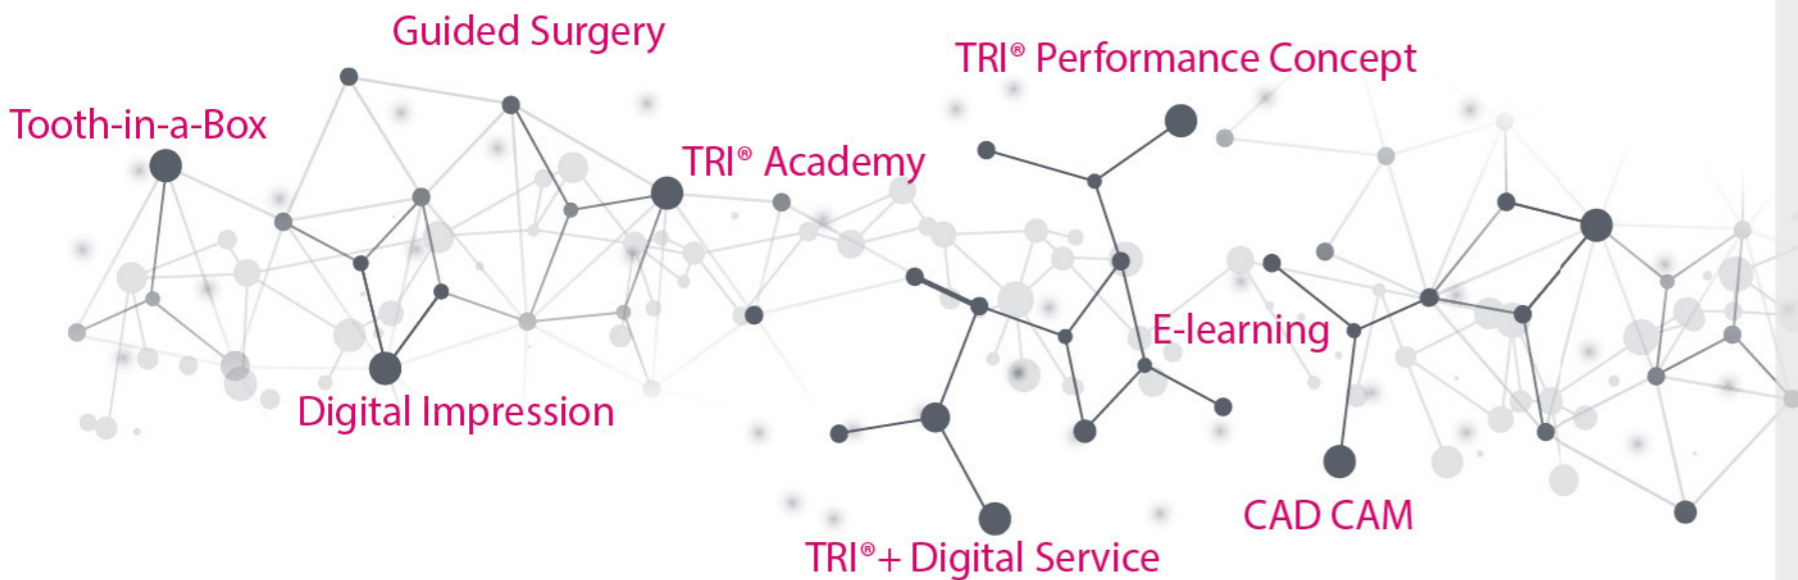

Come and join us for an unforgettable weekend of learning, exchange and entertainment.

We look forward to seeing you in beautiful Ibiza!

WORKSHOP

SOFT TISSUE MANAGEMENT FOR BONE AUGMENTATION.

Marius Steigmann

- Soft tissue tension free closure – step by step
- Tension free flap adaptation – multiple options
- Suturing techniques with and against tension
- Adequate soft tissue manipulation for thin and thick biotype
- Improve soft tissue thickness
- Gain soft tissue elasticity
- Create keratinized gingiva

Different tissue biotype react different to surgical trauma. For this reason we have adjusted the surgical approach to the biotype (tissue thickness) specific to each patient and location in the oral cavity.

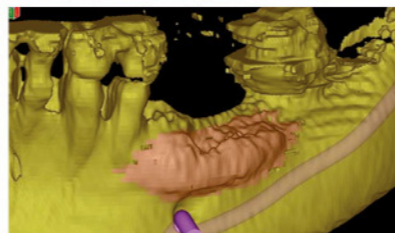

- Sinuslift
- Soft tissue management for sinuslift
- Bone augmentation in the maxilla-palatal sliding flap
- Bone augmentation in the mandible PPF, VBF or Steipod
 - PPF → Periosteal Pocket Flap
 - VBF → Versatil Buccal Flap

The tissue thickness dictates the way it is manipulated for high volume augmentation. Thick biotype can be managed in a classical manner. On the other side thin biotype needs new surgical approaches with specific instruments. The course will describe step by step the gain of soft tissue for tension free closure even in cases of reduced soft tissue thickness.

CONGRESS LOCATION

PALACIO DE CONGRESOS DE IBIZA

Inspired by the architecture of the Ibicencan village churches, this building evokes the culture, diversity, tolerance and freedom of the Pitiuso village. Navigators, pirates, merchants, peasants, hippies and tourists, all those that have visited or settled in these pine covered islands in the course of history have moulded the characteristics and idiosyncrasies of its community. This original edifice was created in the context of the blending of these different cultures and as homage to our history, its objective being to attract new visitors and to be at the service of the local population. The building, with the daylight penetrating through ample skylights, claims to be a response to the island's climate and homage to the patios characteristic of the local architecture of houses and churches.
