

TRI Dental Implants TRI+

At the EAO in Dublin, TRI Dental Implants launched TRI+, a universal interface to ensure seamless compatibility with leading digital-technology partners for implant treatments in digital dentistry.

With the emergence of numerous suppliers and locked digital systems for guided surgery and CAD/CAM, knowing which system provides which advantages is getting more difficult. To help create more transparency, TRI+ has developed a universal interface to eliminate all barriers for their respective treat-

ments. The digital compatibility of the TRI Dental Implants System therefore allows a wide range of indications via 3D planning, guided surgery, CAD abutments, CAD/CAM screw-retained bars and bridges, CAD/CAM cement-retained crowns and bridges or modern treatment modalities such as the “All-on-Four” procedures. Together with the lean TRI implant system, the ease and simplicity of implant dentistry is combined in an elegant and smart way, from simple to complex and without limits.

These enhanced treatment options of TRI+ are combined with a new drilling protocol for guided surgery, which will facilitate immediate implant placement after the first drilling. ■

Product:

TRI+

Indication:

Digital dentistry

Distribution:

TRI Dental Implants Int. AG
Lindenstrasse 14
6340 Baar
Switzerland
