

TRI® Dental Implants takes pro-active climate responsibility

- Dental Implants manufacturer ships his products as of now climate neutral

TRI® Dental Implants is a Swiss emerging leader in innovative modern implant dentistry. Its name "TRI" is the abbreviation of "Through Research Innovative". The company aims to combine the latest clinical insights and know-how in implantology research.

Besides offering high quality standard products, TRI implants wants to show their ecological responsibility. Therefore TRI implants decided, in corporation with the well known German sustainability agency KlimaINVEST Green Concepts, to conduct their product shipment climate neutral.

The term "Climate neutrality" stands for the active mitigation and compensation of emitted greenhouse gases arising from the shipment. All emissions that occur while transporting the companies' parcels and letters, by trains, cars, ships and airplanes, are being 100% climate friendly compensated by supporting a certified UN-climate protection project.

TRI® Dental Implants proves hereby that leading technologies and ecological commitment should accompany each other and take a stand for sustainable economy.
